

METROPOLITAN DIAGNOSTICS & CLINICAL LABS

Patient Diagnostic Report - Educational Specimen Only

Patient Name: Anupam Singh

Age / Gender: 24 / Male

Referred By: Dr. S. Sharma, MD

Date Collected: June 15, 2026

Lab Report ID: #MCL-98701-26

Report Status: Final Specimen

Complete Blood Count (CBC) Panel

Test Parameter	Observed Value	Reference Range	Units	Status
Hemoglobin (Hb)	12.4	13.5 - 17.5	g/dL	LOW
Red Blood Cell (RBC) Count	4.2	4.5 - 5.9	million/uL	LOW
White Blood Cell (WBC) Count	11.5	4.0 - 11.0	10 ³ /uL	HIGH
Platelet Count	280	150 - 450	10 ³ /uL	Normal
Hematocrit (HCT)	37.2	41.0 - 50.0	%	LOW

Diagnostic Interpretation Notes

- Mild Microcytic Anemia:** The low Hemoglobin (12.4 g/dL) and low Hematocrit (37.2%) indicate mild anemia. Common causes include iron deficiency, nutritional deficiencies, or chronic inflammation. Further serum iron studies and Ferritin testing are suggested.
- Mild Leukocytosis:** The elevated White Blood Cell (WBC) count (11.5 10³/uL) suggests a mild inflammatory or immune response. This can be associated with recent minor infections, physical stress, or localized inflammation.
- Normal Platelets:** Platelet count is stable and within normal homeostatic limits, indicating normal clotting functionality.
